Wyoming Refining Company is a Northern Rocky Mountain regional marketer of petroleum products in Wyoming and surrounding states. We operate, by industry standards a small, but sophisticated refinery in Newcastle, Wyoming.

We support the Ethyl Corporation's waiver application for HiTEC 3000 octane improver additive for use in unleaded gasoline. It would permit us to lower our reformer severity thus lowering the level of automatics in our gasoline. In addition, the lower reformer severity cuts down on refinery emissions and conserves crude oil.

We appreciate this opportunity to support Ethyl's waiver request.

Sincerely,

  
Dennis J. McCormick  
President

Air Docket (LE-131)

The Ethyl Corporation has recently resubmitted a waiver request to permit the use of its HITEC 3000 fuel additive in unleaded gasoline. The new waiver request follows additional testing of this gasoline additive and published results give a favorable indication that it can be safely used.

As a small refiner faced with many gasoline and reformulated gasoline concerns, the HITEC 3000 offers an alternative aid in meeting the present and future concerns. The test results also demonstrate several benefits to all who are involved with clean air problems. The benefits of particular interest to our area are emission reductions of NO<sub>x</sub> and toxic air pollutants.

We are very supportive of the Ethyl Corporation waiver request.

Very truly yours,

Harry W. McSwain  
Vice President-Manufacturing
